The care line for fighting fish

The Betta splendens

Betta splendens, also known as Siamese fighting fish, is undoubtedly one of the most fascinating fish in aquatics. Its vibrant colors and unique behavior always attract attention. However, due to its aggressive nature, the fighting fish must be kept individually and socialization with other fish is not possible. Instead, they can be kept with snails and larger shrimp. Originally, the fighting fish comes from Southeast Asia, where it lives in stagnant or barely flowing waters with dense plant growth. To optimize keeping conditions for fighting fish, we recommend a well-planted aquarium with low filter flow and fine-grained, dark gravel. In addition, fighting fish require a low water level to breathe atmospheric air. As a carnivorous species, they feed mainly on insects, larvae, worms, plankton and small crustaceans. At Dennerle, we have intensively studied the special needs of fighting fish to develop a care series that meets their unique requirements.

Betta Booster

Complete food for fighting fish

- Soft granules with 35% insects and crustaceans
- With probiotic lactic acid bacteria and prebiotic ingredients for healthy digestion and optimum nutrient use
- Without fish meal and artificial preservatives
- Optimum protein/ fat ratio
- With multivitamin complex and omega-3 fatty acids

Feeding recommendation

As much as the fish eat within 1/2 minute, two to three times a day

+ Color Booster

Betta Booster

Content: 12 g

Order no.: 7410

Betta Water

Water conditioner for fighting fish

- Transforms aggressive tap water into aquarium water suitable for fish and plants
- Neutralizes dangerous chlorine, binds heavy metals
- **Fin-Care-Complex**: Protects sensitive fins by protective colloids and care substances

Dosage

10 ml / 10 L Tap water

+ Fin-Care Complex

Betta Water

Content: 250 ml

Order no.: 4271

Betta Care

Protection and care for fighting fish

- Protects and cares for the mucous membrane, gills and fins, reduces stress and stimulates the immune system
- With natural aloe vera, sea almond tree extract, medicinal herb extracts, dexpanthenol, vitamins and iodine
- For the well-being and vitality of your Betta

Dosage

2 – 4 ml / 10 L As needed

**Aloe
+Vera**

Betta Care

Content: 250 ml

Order no.: 4270

All for Betta

Complete care for fighting fish

All for Betta

Content:

Betta Booster, 12 g

Betta Care, 250 ml

Betta Water, 250 ml

Order no.: 4272

Betta complete care set

- + Nutrition
- + Protection & care
- + Water care

Study of the Institute for Biology Didactics of the Justus-Liebig-University Gießen

The appropriate aquarium size for keeping male fighting fish (*Betta splendens*) is always the subject of intense discussion. In 2021, a working group of the Institute for Didactics of Biology at the University of Gießen under the direction of Prof. Dr. Hans-Peter Ziemek therefore carried out a specific study on this subject. The question: Can male fighting fish be kept in a 35 L aquarium with the dimensions 40 x 32 x 28 cm in a species-appropriate manner in the long term? Do they show the same behavior and activity there as in larger aquaria?

Result: The Dennerle Nano Tank 35 L proved to be ideally suited for long-term keeping of fighting fish. All animals examined showed their natural behavior from the functional circles of locomotion, resting behavior, metabolic behavior, curiosity/play behavior and social behavior.

No differences could be found in the activity patterns of the fish when kept in 35 L aquaria compared to larger aquaria.

The technology used (filter, heater, light) proved to be excellent for keeping the animals.

Nano Tank

PLANT PRO

Mini Aquarium Set

With 18 Watt LED, Corner Filter and starter guide
